

Measuring Services

We measure, inspect and document your components in our measuring lab (initial samples and serial measurement).

- We make use of every available technique for the assessment of geometric features in the most accurate way and document the test results according to your given requirements.
- We employ all methods of capturing the geometric characteristics and values, including processing via 3 D Coordinate Measuring Machines (CMM), instruments for shape and position, contour measuring devices (microscopic and macroscopic) and measuring microscopes (analog and digital).
- We document the test results when inspecting initial samples or with serial measurements and provide a full statistical analysis.
- Our team consists of well-trained staff which is regularly being trained further in the corresponding field.
- Our measuring equipment, measuring devices and gauges are periodically calibrated and meet the national standards.
- We invoice our services based on individually calculated offers or on fixed hourly rates.
