

SERVICE

Assembly Production and Assembly Services

From development to assembly: we manufacture your assembly to measure.

■ **We advise you as early as the development stage.**

We support our customers from the development of an assembly onwards and contribute our manufacturing expertise during the prototype phase as well.

■ **We also manufacture highly complex assemblies.**

From prototype construction to series production, we guarantee flexibility, technical expertise and the highest reliability.

■ **We machine all machinable materials.**

In particular high-alloy stainless steels, titanium and special materials. Our machinery is ideally equipped for machining complex parts. Highly qualified staff and state-of-the-art technology enable us to manufacture quickly and precisely.

■ **We hold multiple certifications.**

DIN EN ISO 9001, DIN EN 9100 for aerospace and DIN EN ISO 13485 for medical devices guarantee your company quality at the highest level.

■ **You receive the assembly from a single source.**

In addition to the mechanical value creation, we also coordinate heat and surface treatment with external partners.
